Understanding Oxidation and Reduction

What Are Oxidation and Reduction?

Oxidation and reduction are chemical processes that involve the transfer of electrons between substances. These reactions always occur simultaneously in a process known as a redox (reduction-oxidation) reaction.

- Oxidation: The loss of electrons by a molecule, atom, or ion. It often involves an increase in oxidation state.
- Reduction: The gain of electrons by a molecule, atom, or ion. It involves a decrease in oxidation state.

Example of a redox reaction:

In this reaction:

- Sodium (Na) is oxidized from 0 to +1.
- Chlorine (Cl?) is reduced from 0 to -1.

Key Concepts in Redox Chemistry

- Oxidizing Agent: The substance that gains electrons and is reduced.
